1. Purpose and Scope

This guide explains how to build WalkMe content — Smart Walk-Thrus, SmartTips, ShoutOuts, and related items — as a technical writer using the WalkMe Editor and Console. It covers the core authoring workflow: capturing steps, organizing content, and previewing and publishing your work.

This guide is written to be host-application agnostic: the Editor works inside whatever application your organization has deployed WalkMe on. Screens shown throughout use a generic placeholder application to illustrate the authoring experience.

This guide is a portfolio writing sample based on publicly available WalkMe product documentation. It is not official WalkMe, Inc. documentation.

1.1 Audience

This guide is written for technical writers and content builders who are new to authoring in WalkMe, including those transitioning from traditional help authoring tools and writers joining an existing WalkMe implementation.

1.2 Related Documents

- Your organization's WalkMe Administrator Guide (account setup, Segments, permissions)
- Your organization's content style guide, adapted for on-screen guidance
- The WalkMe end-user guide for the application you're building in

2. Key Concepts and Glossary

Writing for WalkMe differs from writing a traditional help article: instead of a standalone page, your content is attached directly to elements on a live page and delivered at the moment a user needs it. The terms below cover the pieces you'll work with most as a builder.

2.1 Builder Glossary

Element	Description
WalkMe Editor	The browser extension (paired with a desktop application) used to build, manage, and publish Smart Walk-Thrus and other WalkMe content directly on the live page.
WalkMe Console	The web-based hub for account-wide tools that live outside the Editor, including the Content Manager, Insights, and account settings.
Content Manager	A centralized, table-based workspace in the Console for organizing, filtering, and bulk-managing WalkMe items across folders and views.
Build Mode / Published Mode	A toggle in the Editor that switches your view between in-progress draft content (Build Mode) and what end users currently see live (Published Mode).
Capture / Element Grade	Capturing is selecting the on-page element a step will attach to. The Element Grade tells you how reliably WalkMe can identify that element again after the page changes.
Trigger	The user action — such as a click or hover — that advances a Smart Walk-Thru from one step to the next.

Segment	A rule-based audience definition (for example, by role or department) used to control who sees a given piece of content.
Flow Tracker	A panel available in Preview mode that shows what happens step by step as a Smart Walk-Thru runs, before it's published.
Environment (Test / Production)	Separate spaces content can be published to. An item can be live in Test for review while still a draft in Production.

3. Getting Started with the Editor

The WalkMe Editor is a browser extension, paired with a desktop application, that you use to build content directly on the page it will appear on. Once installed, it opens alongside the application you're building for.

3.1 Connecting the Editor to a Page

Open the page you want to build on in the same browser tab as the Editor. A connection indicator in the Editor's header shows the current state: green means the Editor is connected and ready to capture elements on that page; red means it isn't connected yet.

Figure 1. The WalkMe Editor connected to a host page, showing the item list and the Build/Published mode toggle.

NOTE

Use the Build Mode / Published Mode toggle to check your work against what end users currently see live, without leaving the Editor.

4. Building a Smart Walk-Thru

A Smart Walk-Thru is built by capturing a sequence of steps, each attached to an element on the page. This section walks through capturing a single step; a full Smart Walk-Thru is simply this process repeated for each step in the task.

4.1 Step-by-Step Procedure

1. With the Editor connected, start a new Smart Walk-Thru and select the element the first step should attach to. The Editor enters capture mode, marked by crosshairs around the selected element.
2. In the Step Properties panel, write the Balloon Title and Balloon Text — keep this short and specific to the single action the user needs to take at this step.
3. Set the Trigger that advances the step, such as On Click, and check the Element Grade the Editor assigns to your selection.

Figure 2. Capturing a step: the selected element (left) and its Step Properties panel (right).

CAUTION

A low Element Grade means WalkMe may have trouble finding this element again if the page's layout changes. Prefer a more specific, stable element when the grade is low.

4. Select Next Step to return to capture mode and continue building the remaining steps in the flow.
5. Repeat this process for each step. Most guidance keeps a single Smart Walk-Thru under 10–12 steps for performance and clarity; longer processes are typically split and reconnected using Connect to Smart Walk-Thru.

5. Organizing Content in the Content Manager

The Content Manager is a table-based workspace in the WalkMe Console for managing everything you've built at scale — across folders, with bulk actions, comments, and version history, instead of hunting through the Editor's item list one page at a time.

5.1 Finding and Organizing Items

1. Open the Content Manager from the WalkMe Console.
2. Use All Folders or My Views to narrow the list, and the column headers to sort by Type, Status, Segment, or when an item was last modified.
3. Select + New Item to start building directly from the Console, or select an existing item to review its status and metadata.

Name	Type	Status	Segment	Modified
Smart Walk-Thru: New Item Setup	Smart Walk-Thru	Draft	All Users	Aug 12, 2026
SmartTip: Category field	SmartTip	Published	All Users	Aug 14, 2026
ShoutOut: Feature announcement	ShoutOut	Published — Test only	Beta Group	Aug 15, 2026
Launcher: Help widget	Launcher	Published	All Users	Aug 10, 2026
Resource: Getting Started video	Resource	Archived	—	Jul 28, 2026

Figure 3. The Content Manager, showing item type, publish status, segment, and last-modified date.

TIP

Custom metadata fields let you track information specific to your team — such as a review owner or a target release — directly alongside each item.

6. Previewing and Publishing

Before anything you build reaches end users, preview it and confirm it's ready — publishing is done per item and per environment, so you control exactly what goes live and where.

6.1 Previewing Your Work

Preview mode shows exactly how your content will appear on the live site, without publishing or installing anything. The Flow Tracker panel follows along step by step as you click through a Smart Walk-Thru, so you can confirm each step fires in the right order.

Figure 4. Preview mode with the Flow Tracker following a Smart Walk-Thru step by step.

6.2 Publishing

1. From the item's Publish dialog, choose the environment: Test, to review with a limited audience, or Production, to make it available to real end users.
2. Work through the pre-publish checklist — confirming WalkMe is deployed, a goal is attached, Unique User ID tracking is on, and your theme and branding are consistent.
3. Select Publish. An item's status can differ across environments, so check both if something doesn't look right after publishing.

Figure 5. The Publish dialog, showing environment selection and the pre-publish checklist.

NOTE

If changes don't appear right away after publishing, refresh the Editor twice before troubleshooting further.

7. Troubleshooting and FAQ

Review the items below before escalating a build issue to your WalkMe administrator or support.

Question	Answer
The Editor shows a red X instead of a green connection indicator.	Make sure the page you want to build on is open in the same browser tab as the Editor, then refresh. The Editor must be actively connected to that page to capture elements.
An element I captured has a low Element Grade.	A low grade usually means the element's selector isn't unique or stable enough (for example, it appears identically on many pages). Try selecting a more specific element, such as a labeled container around the field.
My changes aren't showing up after I published.	Confirm you published to the correct environment — Test and Production are separate. If the environment is correct, refresh the Editor twice; changes can take a moment to propagate.
Can I preview a Smart Walk-Thru before publishing it?	Yes. Use Preview mode and the Flow Tracker to see exactly what end users will experience, without publishing or affecting live users.
Who do I contact about Segments or permissions?	Segment and permission configuration is typically managed by your organization's WalkMe administrator. Reach out to your Digital

	Adoption Training Team for access.

Appendix A: New Builder Pre-Publish Checklist

Use this checklist before publishing any new WalkMe content to Production.

	New Builder Pre-Publish Checklist
☐	Editor shows a green connection indicator on the target page
☐	Every captured element has an acceptable Element Grade
☐	Content has been reviewed in Preview mode using the Flow Tracker
☐	A goal has been added so success can be measured after launch
☐	Segments are set correctly for the intended audience
☐	Content was published to Test and reviewed before publishing to Production
